The scripts used to generate the tables and figures in the paper are contained in the subfolders to the corresponding figures and tables. Each subfolder is self-contained and includes the code and all datasets required to generate the output shown in the tables and figures.

Table 1 and Table 2 (subfolder Tab_01 and Tab_02) are generated using Matlab. Table 3 and Table 5 (subfolder Tab_03 and Tab_05) are generated using the Julia programming language. Table 4, as well as Tables 6, 7, 8, 10, 11, and 12 are generated using Stata.

To run the Stata Scripts, install `newey2` and `outreg2` by running “`ssc install newey2`” and “`ssc install outreg2`,” respectively. Also, replace the lines starting with “`D:\Dropbox\...`” in the Stata scripts with the path to the folder containing the corresponding script and csv file. The `.do` files create individual Word and `.txt` files with the regressions results. Each folder has a `.pdf` file with the output of the individual Word files, as well as the Stata `.log` file. For instance “`Table_07_Out.pdf`” for the results shown in Table 7.

All figures are generated in Matlab using the scripts in the corresponding subfolders (see Fig_01, etc.).
